Válvula de Desagüe Automático CDV32 1/2” A 3/4”

DESCRIPTION

The CDV32 condensate drain valve automatically discharges air and condensate from steam systems during start-up. A compression spring keeps the valve open when the system is not pressurized. As soon as the operating pressure reaches the closing pressure to which the CDV is set, the valve closes. If the operating pressure drops below the closing set pressure, the spring force will cause the CDV32 to open once again.

MAIN FEATURES

Hand purging knob allowing operation with system under pressure for dirt removal.
Prevents vacuum and frost formation.
Built-in, easy-to-clean strainer.

USE: Saturated steam.

AVAILABLE MODELS: CDV32 – carbon steel.
